

ARISTA BIOPHARMA LIMITED

Quality Assurance Department | Manufacturing Deviation Report

Deviation Reference	DEV-2026-00738	Date / Time	09-Nov-2026, 09:20 IST
Reported By	Compression Operator	Logged By	QA Executive

1. Site & Process Details

Manufacturing Site: Arista Biopharma, Hyderabad Site

Area / Block: Block C - Tablet Compression Suite

Process Step: Tablet compression in-process weight control

Shift: A Shift

2. Product & Batch Details

Product Name	Losartan Potassium Tablets
Product Strength / Grade	50 mg
Batch / Lot Number	LST261109A
Manufacturing Date	09 November 2026
Expiry Date	October 2028
Affected Quantity	Approx. 18,500 compressed tablets

3. Nature of Deviation

During routine in-process checks for batch LST261109A, the average tablet weight was observed at 262 mg for 20 consecutive tablets. The approved batch manufacturing record specifies a target tablet weight of 250 mg with an acceptable range of 242.5 mg to 257.5 mg. Compression was stopped at 09:20 IST, the tablets compressed since the previous acceptable check were segregated, and QA was informed for assessment.

4. Potential Impact & Initial Severity

Potential impact includes tablet weight variation, possible assay variability, and risk of out-of-specification content uniformity if affected tablets proceed to coating and packing. No segregated tablets have been released to the next processing step. Initial severity is proposed as Major because an in-process control limit was exceeded for a commercial batch.
